

Protecting your assets

ProtectUK publication date

13/10/2021

This section describes the core underlying principles of NPSA's protective security methodology. This methodology defines a holistic approach to the protection of your most important or sensitive assets - as protective security measures can only be truly effective if the physical, personnel and cyber elements are considered complementary to each other during the formulation of a protective security solution.

For more information, please visit the [NPSA website](#).
