ProtectUK

Access control systems for delay and detection

ProtectUK publication date
23/08/2021

Physical security technologies often converge into a security control room and, while individual technologies may be working, the control room may not be effectively using this information.

Physical security technologies can:

- offer area surveillance (via Video Surveillance Systems)

- detect intruders and/or high threat scenarios

- control access to secure areas, when used in conjunction with physical barriers

For more information, please visit the [NPSA website](#).
