

Threat levels

ProtectUK publication date
12/03/2022

Threat levels are designed to give a broad indication of the likelihood of a terrorist attack.

SUBSTANTIAL – An attack is likely

The main threats to national security are terrorism, espionage, cyber threats and the proliferation of weapons of mass destruction, many of which impact on the UK's national infrastructure.

Understanding the threat facing us is key to ensuring protective security measures and mitigations are proportionate, effective and responsive.

Threat levels

Threat levels are designed to give a broad indication of the likelihood of a terrorist attack.

How are threat levels decided?

The national threat level for the UK from all forms of terrorism, including Islamist, extreme right-wing, LASIT and Northern Ireland are set by Joint Terrorism Analysis Centre (JTAC).

The threat level for Northern Ireland in Northern Ireland is set separately, by the Security Services.

In reaching a judgement on the appropriate threat level in any given circumstance several factors need to be taken into account.

These include:

- Available intelligence. It is rare that specific threat information is available and can be relied upon. More often, judgements about the threat will be based on a wide range of information, which is often fragmentary, including the level and nature of current terrorist activity, comparison with events in other countries and previous attacks. Intelligence is only ever likely to reveal part of the picture
- Terrorist capability. An examination of what is known about the capabilities of the terrorists in question and the method they may use based on previous attacks or from intelligence. This would also analyse the potential scale of the attack
- Terrorist intentions. Using intelligence and publicly available information to examine the overall aims of the terrorists and the ways they may achieve them including what sort of targets they would consider attacking

- Timescale. The threat level expresses the likelihood of an attack in the near term. We know from past incidents that some attacks take years to plan, while others are put together more quickly. In the absence of specific intelligence, a judgement will need to be made about how close an attack might be to fruition. Threat levels do not have any set expiry date, but are regularly subject to review in order to ensure that they remain current
